SOFTWAREarchitekt.at

Root Module with Lazy Loading

```

const APP_ROUTE_CONFIG: Routes = [
  {
    path: 'home',
    component: HomeComponent
  },
  {
    path: 'flights',
    loadChildren:
      './[...]flightBooking.module#FlightBookingModule'
  }
];
  
```

Page • 12

SOFTWAREarchitekt.at

Routes for "lazy" Module

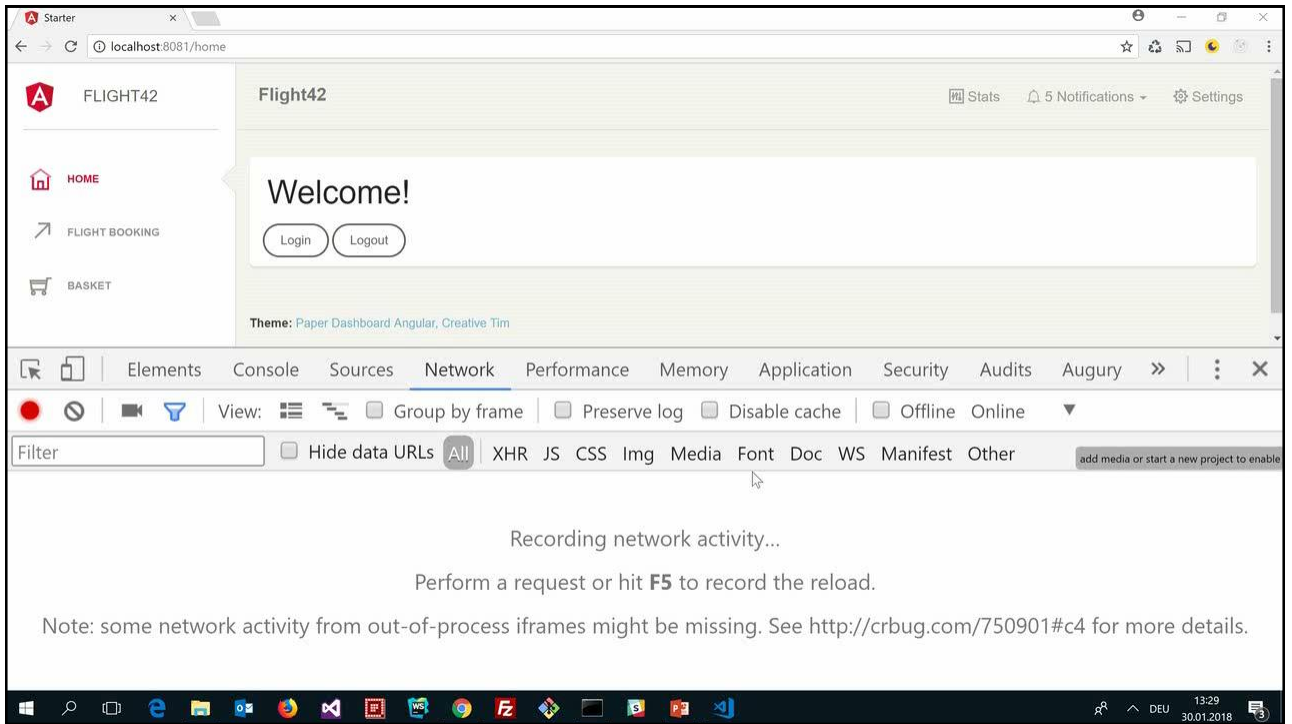

```
const FLIGHT_ROUTES = [
  {
    path: '',
    component: FlightBookingComponent,
    [...]
  },
  [...]
]
```

Routes for "lazy" Module

```
const FLIGHT_ROUTES = [
  {
    path: 'subroute',
    component: FlightBookingComponent,
    [...]
  },
  [...]
]
```

flight-booking/subroute

Triggers Lazy Loading w/ loadChildren

Lazy Loading

- Lazy Loading means: Loading it later
- Better startup performance
- Delay during execution for loading on demand

Preloading

Idea

- Module that might be needed later are loaded after the application started
- When module is needed it is available immediately

Activate Preloading

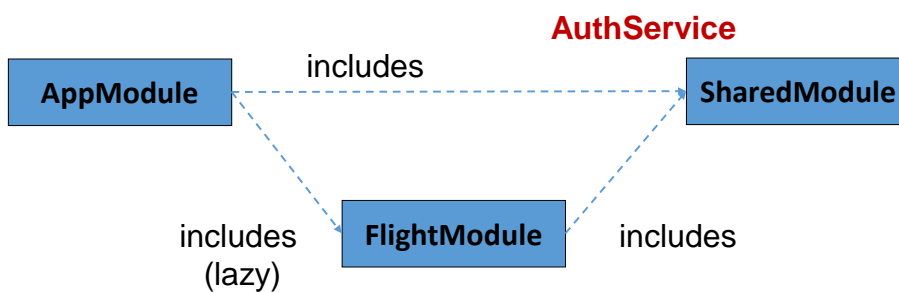

```
...  
imports: [  
  [...]  
  RouterModule.forRoot(  
    ROUTE_CONFIG,  
    { preloadingStrategy: PreloadAllModules }));  
]  
...
```

Lazy Loading and Shared Modules

SOFTWAREarchitekt.at

Solution

Only import CoreModule into AppModule!

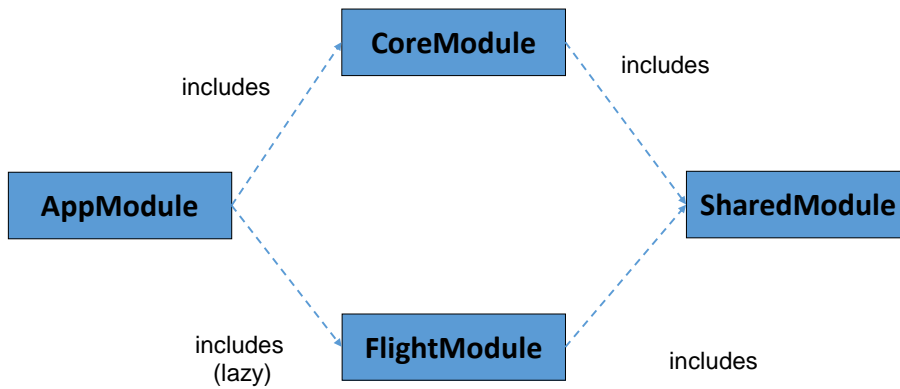

SOFTWAREarchitekt.at

DEMO

SOFTWAREarchitekt.at

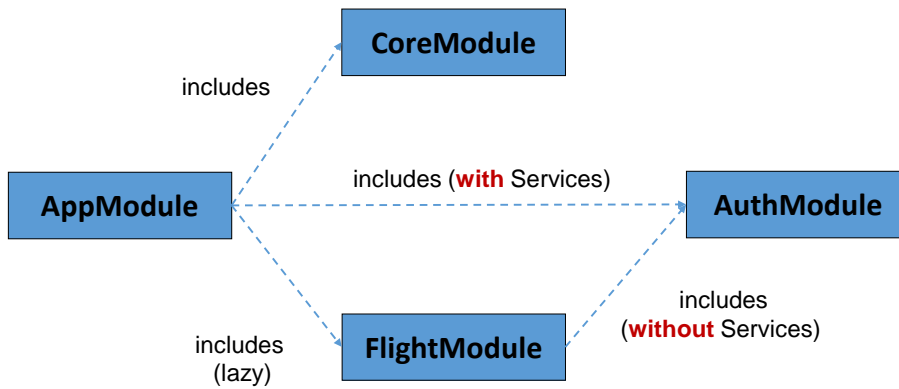

Huge CoreModule?

Solution (for Libraries)

Solution (for Libraries)

Auth Module

```
@NgModule({  
  [...],  
  providers: []  
})  
export class AuthModule {  
}
```

Auth Module

```
@NgModule({  
  [...],  
  providers: []  
})  
export class AuthModule {  
  static forRoot(): ModuleWithProviders {  
    return {  
      ngModule: AuthModule,  
      providers: [AuthService, [...]]  
    }  
  }  
}
```

DEMO

Performance-Tuning with OnPush

DEMO

OnPush

"Notify" about change?

- Change bound data (@Input)
 - OnPush: Angular just compares the object reference! 
 - e. g. oldFlight === newFlight
- Raise Event within the component
- Notify a bound observable 
- Trigger it manually
 - Don't do this at home ;-)
 - At least: Try to avoid this 

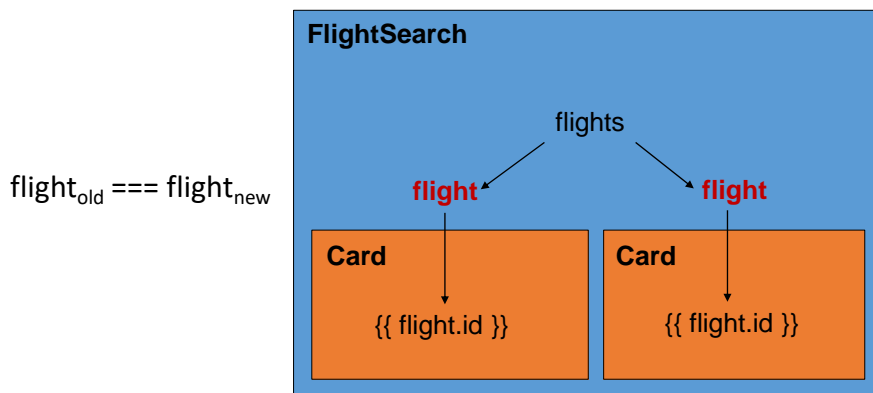

SOFTWAREarchitekt.at

Activate OnPush

```
@Component({  
  [...]  
  changeDetection: ChangeDetectionStrategy.OnPush  
})  
export class FlightCard {  
  [...]  
  @Input() flight;  
}
```

SOFTWAREarchitekt.at

Change Inputs

SOFTWAREarchitekt.at

Observables and OnPush

```
<flight-card  
  [item]="flight$ | async" [...]>  
</flight-card>
```

DEMO

SOFTWAREarchitekt.at

Ahead of
Time (AOT)
Compilation

Angular Compiler

Approaches

- JIT: Just in Time, at runtime
- AOT: Ahead of Time, during build

SOFTWAREarchitekt.at

Advantages of AOT

- Better Startup-Performance
- Smaller Bundles: You don't need to include the compiler!
- Tools can easier analyse the code 
 - Remove not needed parts of frameworks
 - Tree Shaking 

SOFTWAREarchitekt.at

Angular CLI

- `ng build --prod`
- `@ngtools/webpack` with `AotPlugin`
- Soon `AngularCompilerPlugin`
- Can be used without CLI too
